

Growing up wild

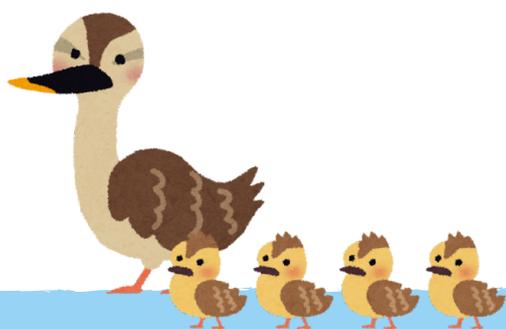

In the Spring

Nature is waking up from its long winter sleep – are you ready to greet it? It's time to get outdoors and explore the signs of Spring!

Ideas for all sections

- Search for signs of spring
- Go on a bluebell, blossom or daffodil walk
- Spot spring animals
- Listen to the spring chorus
- Do some spring photography
- Make a spring nature mandala

Froggy facts

In early spring, you should be able to spot frogspawn and toadspawn in ponds. If you're lucky and you spot some clumps of these strange eggs, take note of their shape. Frogs lay 'frogspawn', which looks like a round cluster of eggs, while toads lay 'toadspawn', which comes in long ribbons.

It might seem like there are a lot of eggs, but due to predators only around one in 50 will survive.

Beautiful bluebells

Every year in springtime, bluebells dazzle with their display in our woodland. Almost half the world's bluebells are found in the UK – elsewhere they're relatively rare!

These special flowers are protected under the Wildlife and Countryside Act – It's against the law to intentionally pick, uproot or destroy bluebells.

Bee friendly

Look out for the first bees on warm days in early spring. These are likely to be queens who are gathering nectar and pollen after surviving a long winter.

Bees are vital pollinators emerging in search of nectar and pollen in the Spring, playing a crucial role in the health of our ecosystems.

How did you go wild? Share your story with us!
